

The NCN/A3R ("NA3")

Native Application Development Framework

Linguistic Technology Systems
Amy Neustein, Ph.D., Founder and CEO
amy.neustein@verizon.net
(917) 817-2184

The NCN (Native Cloud/Native) Protocol

Cloud/Native Components as back-ends for native software

- Our “Native Cloud/Native” protocol refers to native application front-ends paired with Cloud/Native (back-end) container instances.
- Code libraries and data representation may be shared across both endpoints.
- Common representation on both server- and client-side streamlines network communications (no need to marshal data between different formats).
- The NA3 technology can be ported to other application frameworks apart from Qt (wxWidgets, XCode, MFC, etc.).
 - Note: This presentation will focus on NA3’s default Qt implementation.

How Cloud Back-Ends Enhance Native Front Ends

- Cloud Backup ● Share Data between Users ● Collaborative Editing
- Maintain users’ application state across different computers (home/school/office)
- Upgrade running applications without needing to re-compile

“Application-As-A-Resource” (A3R)

The A3R Application Model

- A3R Applications are self-contained, citable resources which can conform to modern resource documentation standards, such as the Research Object protocol.
- A3R Applications can use Hypergraph-structured metadata to describe data types, procedures, User Interface features, and inter-type relationships (for instance, the relation between data types and the types of GUI components which visualize them).

A3R Developer Tools

- Hypergraph-based data modeling and serialization.
- Framework for building custom scripting, parsing, and data persistence engines.
- Enhanced support for applications specifically designed to access research data sets.
- Convenient framework for sharing data among applications (to establish inter-application workflows) or between applications and cloud or web services (including leveraging “NCN” services).

The Qt Ecosystem

Qt is the most popular native, cross-platform application-development framework.

- ◆ ~1 million active developers ◆ Over 5,000 client companies ◆ Worldwide “Qt Partners” Ecosystem ◆ ~US \$25 billion overall market

However ... Limited Qt Cloud Integration Support

- “Qt Cloud Services” Discontinued in 2016.
- Currently there is no standard model for accessing Cloud services from Qt applications.
- Nor is there a standard Qt-based Cloud/Native container architecture.

NA3 In Different Software Ecosystems

Potentiel NA3 Markets

Windows MFC (\$135b market size) A3R can be implemented in C++/CLI, building off of a generic-C++ version using the C++ Standard Library in place of Qt-specific data structures.

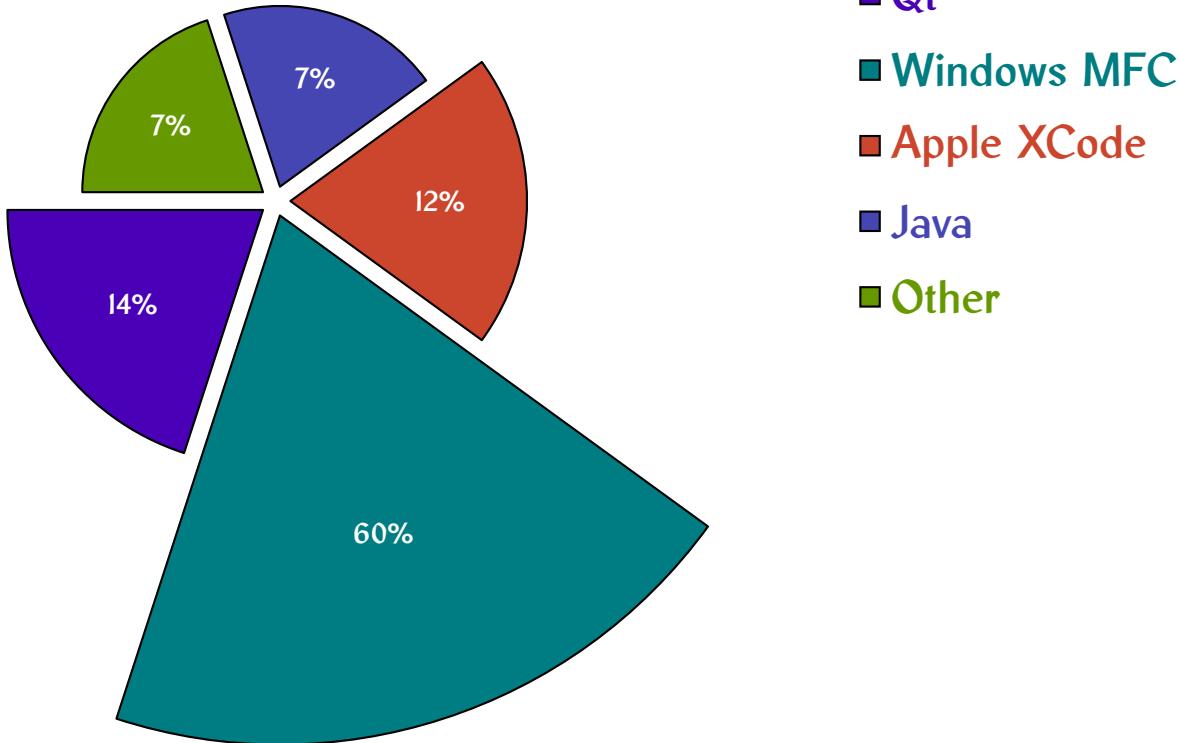

Apple XCode (\$25b market size) Apple Operating Systems are based on Linux, so a Linux-oriented A3R implementation can form the basis of an XCode version. This XCode implementation would also be built around the C++ Standard Library.

JavaFX (\$12.5b market size) The Java programming language provides the most widely used cross-platform application development framework outside of Qt. It is feasible to port C++ A3R implementations to Java. The core of this re-implementation would involve designing a Java Hypergraph Library compatible with the A3R serialization and Interface Definition protocol.

Workflow Management (\$10b market size) A3R plugins can be added to new or existing applications to support inter-application networking, allowing multiple applications to be unified into workflow-management systems.

Overview of Software Development Market

In feedback.

Example Use-Cases

Inter-Application Networking and Workflow Management

- Export data and instructions between Qt-based applications (slides 6-7).
- Embed document or multi-media viewers inside scientific or dataset applications (slides 18-21).

Responsive desktop-style applications for enhanced UX

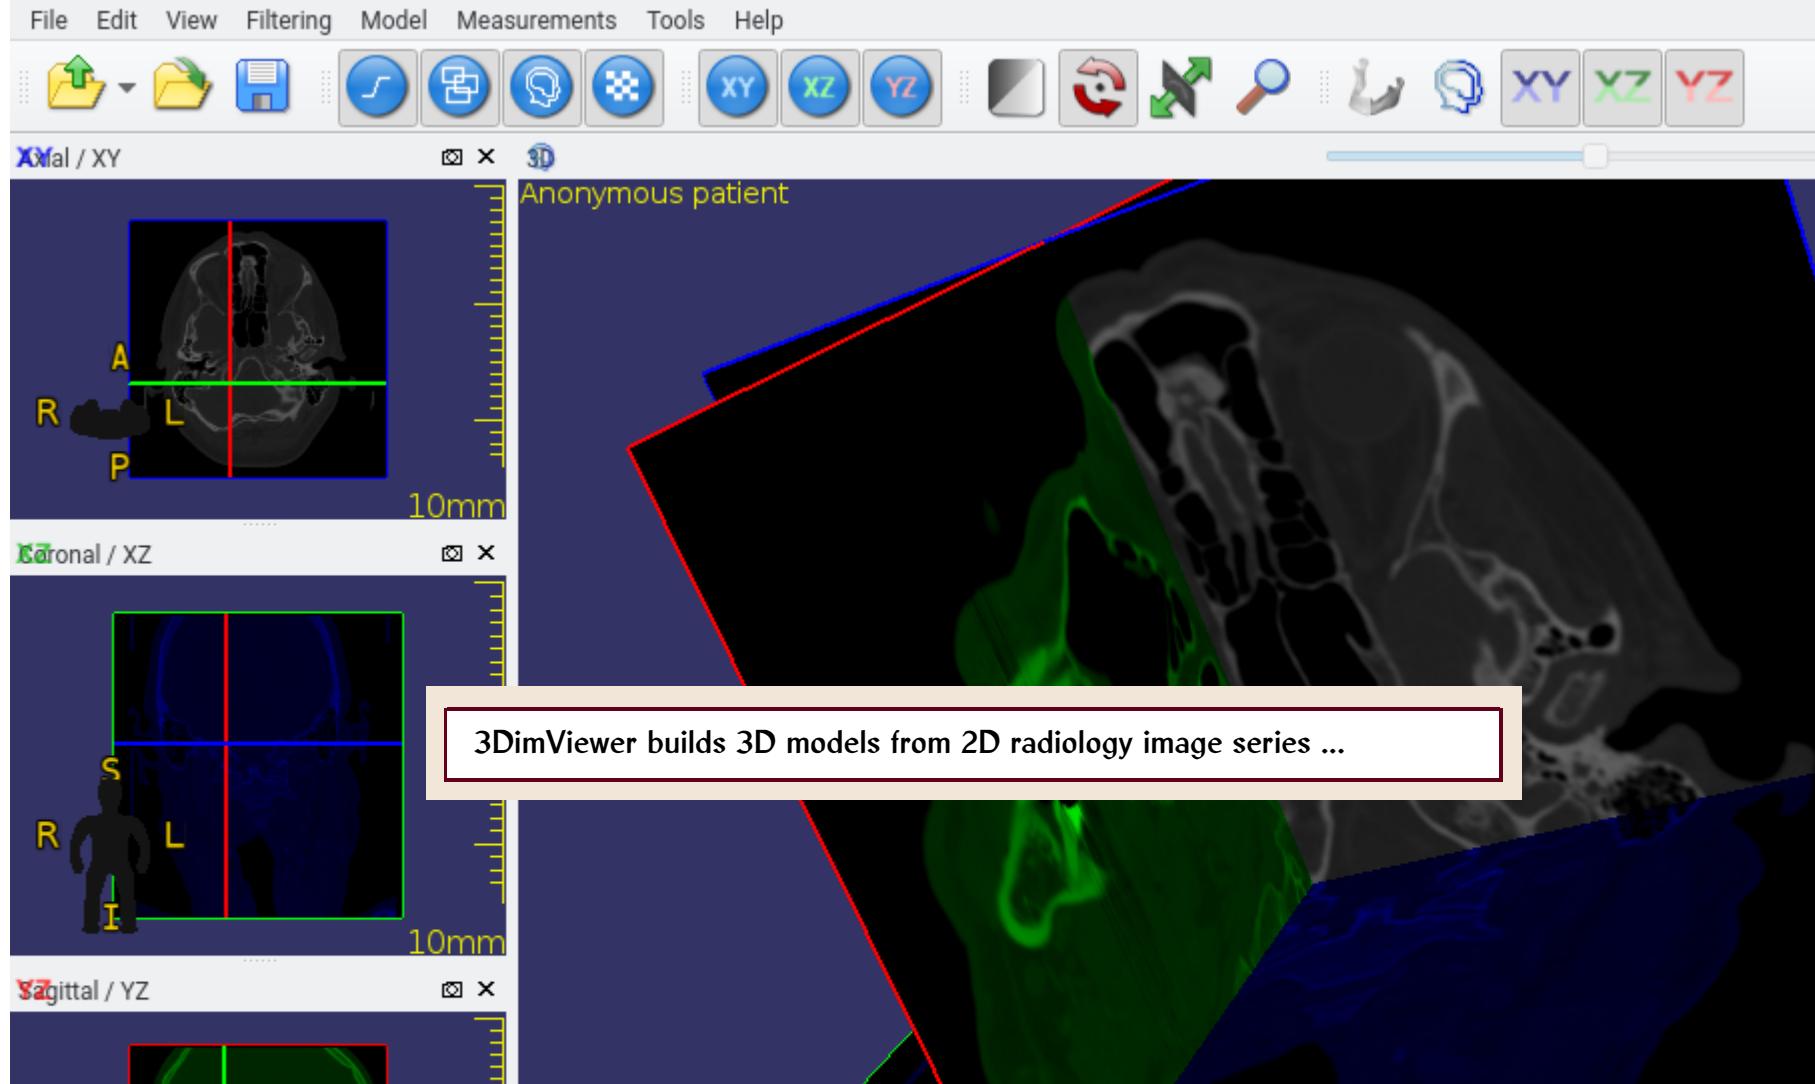

Native applications offer superior User Experience, leveraging distinct interactive features of desktop GUIs: context menus, dialog boxes, tool tips, Multiple Window Display, dock windows, and so on:

- Compelling front-ends for e-commerce (Note: “46% of global online retail orders happen on desktop”, source: lefronic.com), Real Estate, VR, etc. (slides 11-17).
- For scientists and researchers, build innovative data-collection instruments as well as interactive Research Object applications (slides 8-10).

An Example of Inter-Application Networking

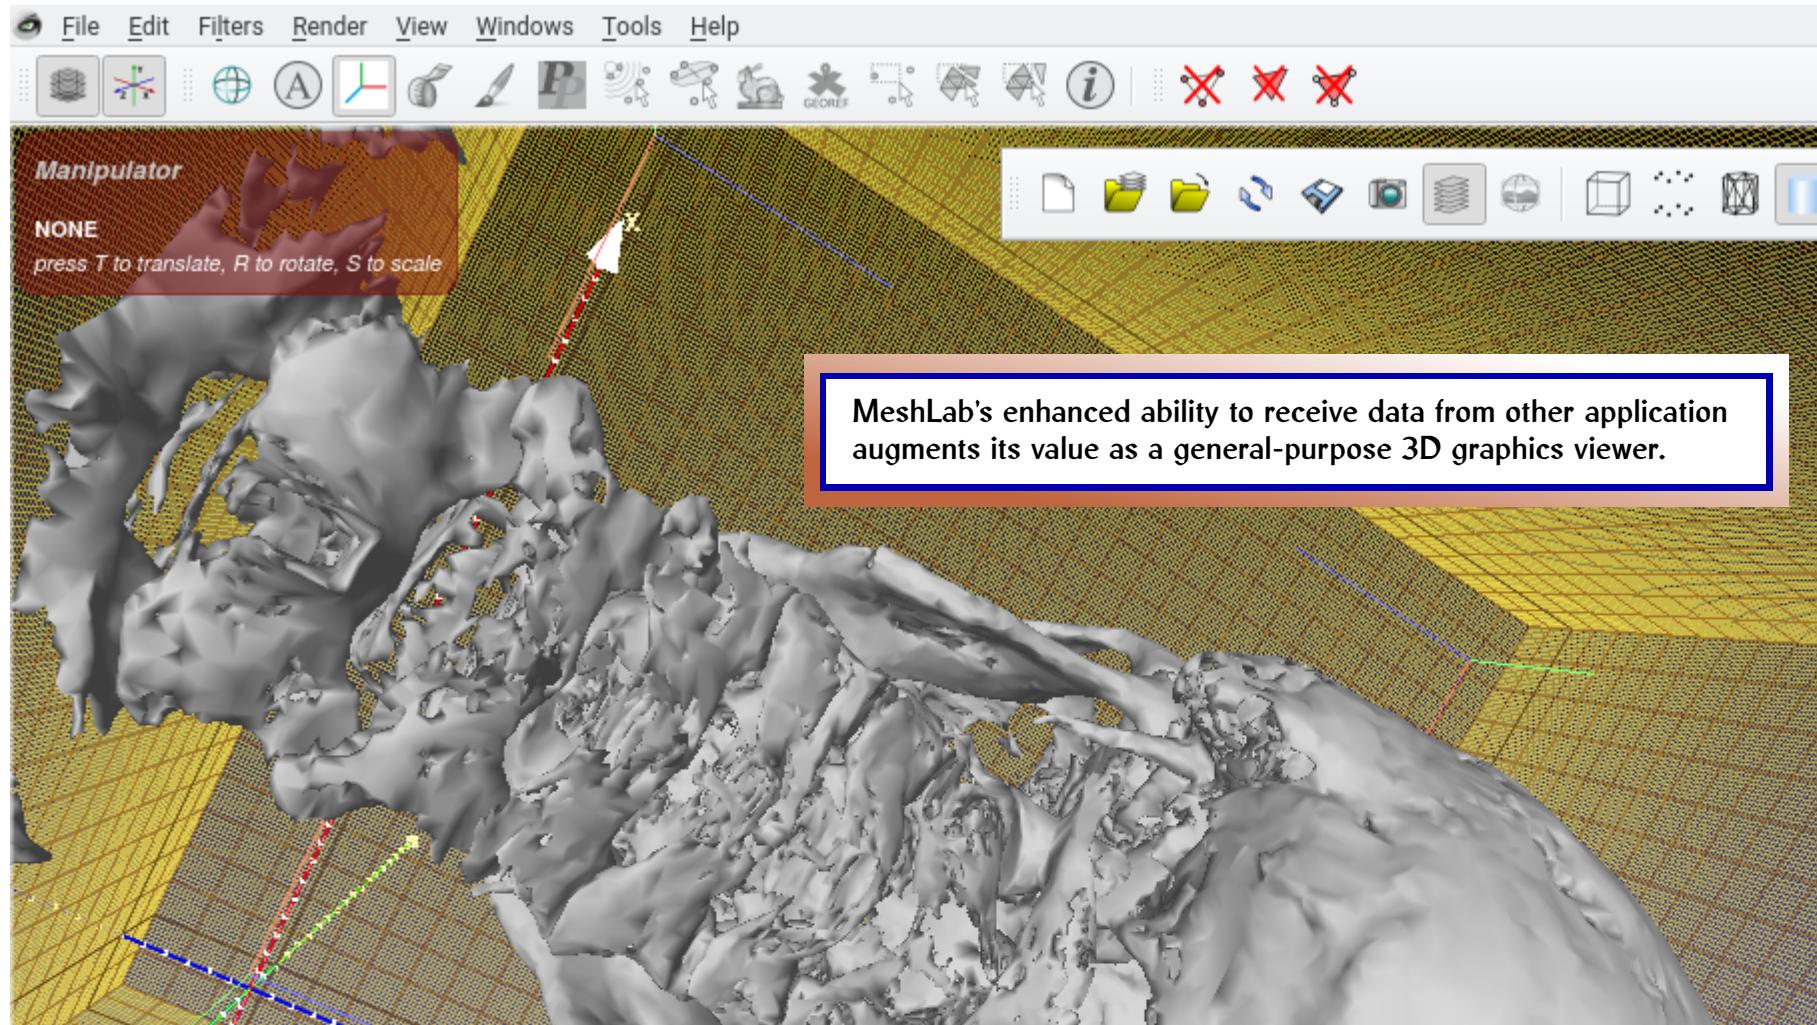

Research S
Research Slide 2
Research Slide 3
Research Slide 4
Research Slide 5

This slide and the next demonstrate a case-study where inter-application data sharing enhances the capabilities of two applications: 3DimViewer (a radiology tool) and MeshLab (a 3D graphics engine).

3D Graphics Sent to MeshLab

... Once the 3D tissue sample is constructed by 3DimViewer's algorithms, an A3R inter-application networking protocol (implemented as an extension to both applications) allows 3DimViewer to export the model to MeshLab so that it may be studied in a more comprehensive 3D viewing environment.

MeshLab's enhanced ability to receive data from other application augments its value as a general-purpose 3D graphics viewer.

A3R Applications as Research Objects

Complementary to A3R components which facilitate *obtaining* research or experimental data, A3R “Data-Set Applications” are also powerful tools for visualizing and analyzing research findings.

Data-Set Applications are “Research Object Bundles” — combinations of code and data, providing access to data sets without the need for external software dependencies.

The interface shows a central image of a cell with a red arrow pointing to its nucleus. To the left is a vertical stack of small thumbnail images. To the right are toolbars for annotations: Arrows, Comments, Lists, Arcs, and Rulers. At the bottom are controls for Silhouette Zoom, Image Transforms, Annotations Transforms, and various navigation buttons like Pan, Zoom, and Rotate.

As a case-study in enhanced User Experience afforded by native applications, consider how static PDF catalogs and brochures can be turbo-charged into engaging, interactive software-based presentations.

The screenshot shows a native application interface for a shoe catalog. In the center is a large image of two brown leather sneakers with white soles. A context menu is open over the right shoe, listing options: Detach Image, Detach Noteboook, Detach Description, **Detach Everything** (which is highlighted), Merge Windows, Explore Color Matches ..., View 3D Model ..., Take Screenshot, View Item List, and View Shopping Cart. To the left of the main image is a sidebar with three smaller thumbnail images of shoes. At the bottom of the screen, there are navigation buttons for item selection (Item: 3), image zoom, and arrows. Below the main image, there are tabs for 'Overview', 'Features', 'Specs', and 'Reviews'. Under the 'Features' tab, there is a bulleted list: • Leather upper, • Lace-up, • Round toe. On the right side, there is a section titled 'Grand Crosscourt II Sneaker' with a description: 'Sleek and simple, the Grand Crosscourt II sneaker from Cole Haan is the perfect way to add some tailored casual style to your every day look!'. Below this description is a heading 'Actions:' followed by a bulleted list: • [Add to Cart](#), • [Explore Colors](#). There are also two small color swatches for the shoe's color options.

Interactive Shopping Carts

Instead of static lists, shopping carts can be made into multi-dimensional, multiple-window interactive displays.

The screenshot illustrates a multi-dimensional shopping cart interface. At the top, a navigation bar includes File, Email, Events, APIs, Web, and Broadleaf. Below it are search and filter controls: Page: 0, Search for:, and a zoom setting of 100%.

Two product windows are displayed side-by-side:

- Product Window <2>:** Features a purple peony bouquet. The description on the left reads: "Lily Garden Silk Peony Bouquet Home Decoration, Lilac, 18 Inches High". The window includes tabs for Overview, Specs, Reviews, and Q & A, with "Overview" selected. Buttons for OK and Cancel are at the bottom.
- Product Window <3>:** Features a large arrangement of frosted hydrangeas. The description on the right reads: "Frosted Hydrangea, Mauve, 32 Inches High, 12 Floral Sprays". This window also has tabs for Overview, Specs, Reviews, and Q & A, with "Overview" selected. Buttons for OK and Cancel are at the bottom.

A3R programming can also bring enhanced UX to Real Estate presentations: instead of just groups of photos, properties can be displayed via interactive, multi-dimensionally organized, color-coded photo viewers.

The screenshot shows a software interface for viewing real estate photos. On the left, a grid of thumbnail images represents different property types. A specific thumbnail in the bottom row is highlighted with a red border and has an arrow pointing to a larger, detailed view of a bedroom on the right. The bedroom has green walls, a large wooden bed, and a chaise lounge. A white callout box labeled "Current Photo" is positioned over the bedroom image. On the far left, a sidebar titled "Groupings" lists categories with corresponding colored bars: Entrance/Foyer/Hall (teal), Kitchen/Dining Room (yellow-green), Living Room/Den (purple), Bath/Powder Room (blue-gray), Bedroom/Closet (teal), Master Bedroom/Spa (light green), and Basement/Game Room (gray). Arrows point from the sidebar to both the highlighted thumbnail and the detailed bedroom view. At the bottom, there are navigation arrows, an item count of "Item: 19", an "Image Zoom" slider, and standard "OK" and "Cancel" buttons.

These slides demonstrate visual cues aiding photo navigation, such as color bands (overlays) that switch from horizontal to vertical indicating which photos have been viewed so far; and the thumbnail of the current viewed photo marked with a thick colored border (surrounding the thumbnail photo and its overlays).

The screenshot shows a photo viewer interface with a grid of thumbnail images. A large, detailed image of a living room is displayed on the right side of the screen. On the left, there is a sidebar with a list of 'Groupings' and a navigation bar at the bottom.

- Already Viewed (vertical color band):** A callout points to a thumbnail in the second row, third column, which has a thick vertical purple border around it.
- Not Yet Viewed (horizontal color band):** Another callout points to a thumbnail in the fourth row, fifth column, which has a thin horizontal purple border around it.
- Current Photo (viewed for the second time):** A callout points to the same thumbnail in the second row, third column, which now has a thick horizontal purple border around it, indicating it is the current photo being viewed.

Groupings:

- Entrance/Foyer/Hall
- Kitchen/Dining Room
- Living Room/Den
- Bath/Powder Room
- Bedroom/Closet
- Master Bedroom/Spa
- Basement/Game Room

Filtering Photos

Another feature which may be conveniently implemented in A3R-style photo viewers is a filtering option, which — given a collection of pictures classified into several groups — allows users to show or hide photos based on the group they belong to (note the check-box buttons on the group listing).

The screenshot shows a photo viewer interface with a sidebar of thumbnail images and a main view showing a living room. The sidebar includes a 'Groupings' section with a list of room categories and their corresponding check boxes.

Visible Groups: Entrance/Foyer/Hall (checked)

Check Boxes: Kitchen/Dining Room (unchecked), Living Room/Den (checked), Bath/Powder Room (unchecked), Bedroom/Closet (checked), Master Bedroom/Spa (checked), Basement/Game Room (unchecked).

Hidden Groups: Basement/Game Room (unchecked)

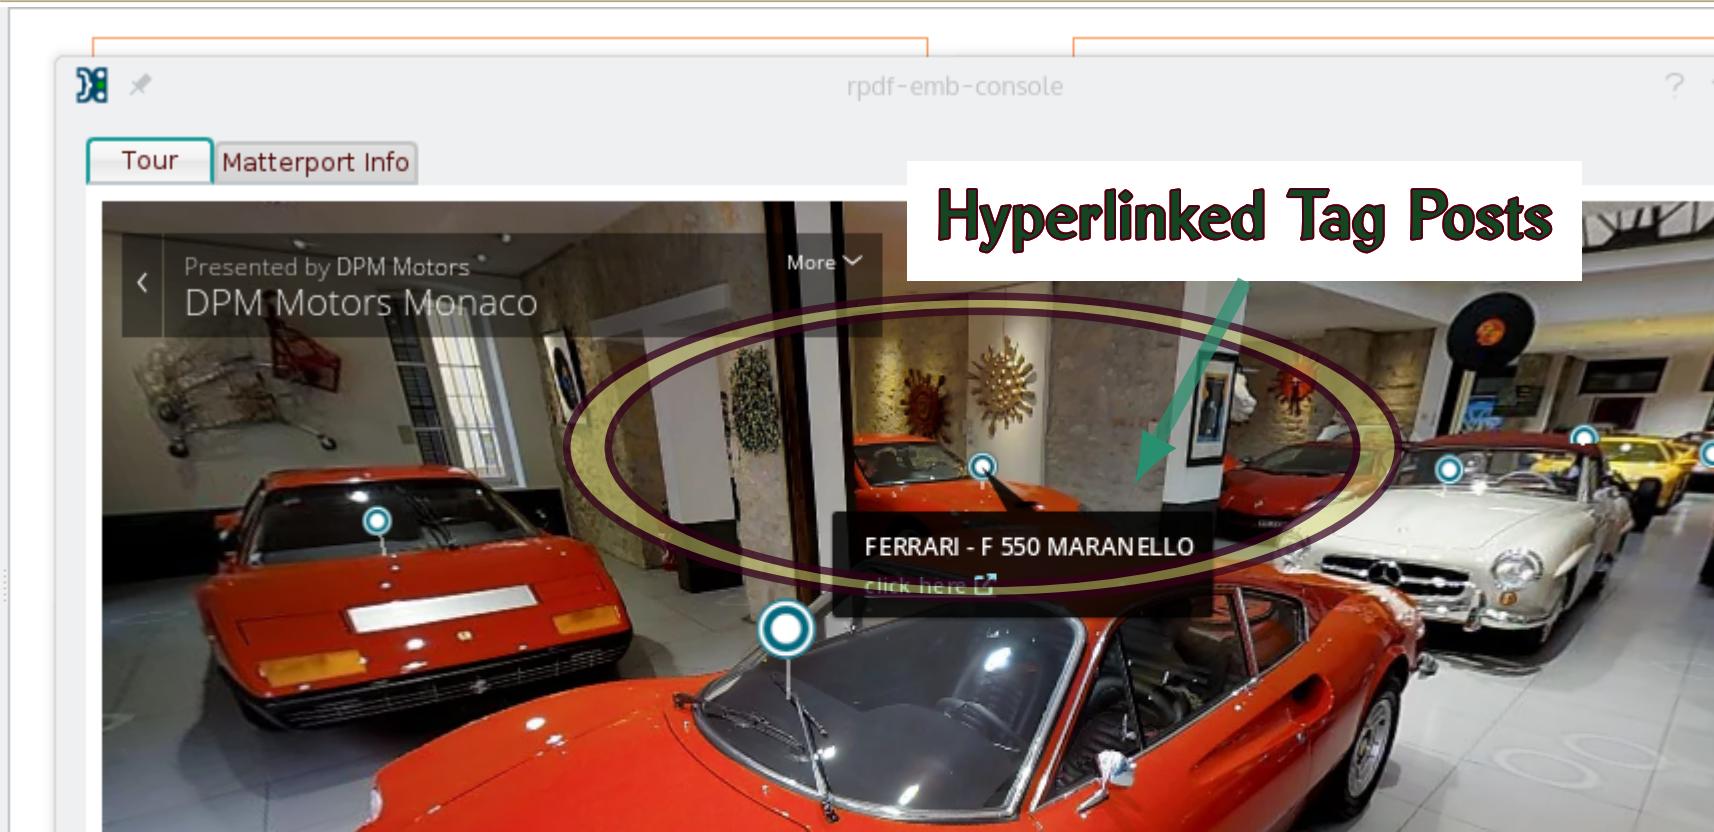

Item: 3 Image Zoom: [Slider] OK

Navigation icons: back, forward, search, etc.

OK

Interactive VR: Hyperlinked Tag Posts

Another emerging technology, relevant to both e-Commerce and Real Estate, is the use of Panoramic Photography to create immersive Virtual Reality scenes. Panorama-Photography-based VR engines, like Matterport, allow “tag posts” with embedded hyperlinks, which in a native-application context become channels of communication between the VR renderer and the host application. The full capabilities of this interactive modality — combining VR with clickable links and text “bubbles” — can only be fully realized via Virtual Reality engines (such as WebGL) embedded in native software.

A3R Document Viewers

Publishing
1
Publishing Slide
2
Publishing Slide
3
Publishing Slide
4

A3R applications may embed viewers for document formats such as e-Pub, HTML, and PDF; then supplement conventional publications with special components customized for individual manuscripts: e.g. (as in this case), a widget allowing readers to visually explore patterns in classical Indian music.

The screenshot shows a digital journal interface. At the top, there are three icons: a gear, a book, and a person reading. Below them are links for 'References', 'Library', and 'Reading'. A navigation bar at the bottom includes 'HTML Source', 'Lisp', 'CSS', and 'XML'. The main content area features the title 'ANTHROPOLOGY AND HUMANISM' in large brown letters. Below it is a blue link 'Explore this journal >'. On the left side, there is a sidebar with a red background containing the text 'Read article view' and a small orange icon.

This screenshot shows a specialized A3R viewer window. At the top, it says 'Display Tala Types: Jhoomra/Dhamar (14 beats)'. Below this is a diagram consisting of two horizontal rows of colored rectangles. The top row is red, and the bottom row is divided into four sections by green vertical lines, with purple horizontal lines separating the sections. Below the diagram is a slider labeled 'Patterns' with 'Pattern 1 (3-4-3-4)' on the left and 'Pattern 2 (' on the right. A file path 'File /extension/ScignSeer/articles/svg/tala.svg' is shown below the slider. At the bottom right is a 'Proceed' button. The right edge of the window has a vertical scroll bar and a decorative sunburst graphic.

A3R Document Viewers as Embedded Components

Document Viewers may also be embedded in host applications which provide domain-specific visualization capabilities. For example, chemistry papers might be viewed within IQmol (a Qt-based program for molecular visualization and physical/chemical analysis) via an A3R document-viewer plugin.

The screenshot shows a chemistry application interface. At the top is a menu bar with options: Display, Build, Calculation, SONIC, and Help. Below the menu is a toolbar with various icons. On the left, there's a sidebar with a "Springer" logo and search results for "Cysteine". The main area features a large 3D ball-and-stick model of a cysteine molecule, with atoms represented by spheres in blue, yellow, red, and white. Overlaid on the interface is an A3R document viewer window. This window has a title bar "SONIC Reader" and contains a search interface with the text "Springer Keyword Search: Cysteine", a "Search" button, and links to "Springer Web Search Home" and "Search Saved Articles". The A3R window also includes standard window controls like minimize, maximize, and close. The overall background is blue, and the application has a clean, modern look.

In this case a video player is launched in a dialog box, floating above the article text. For those reading digital books or articles, videos and other multimedia content can be presented through secondary windows launched via context menus; text and multimedia may thereby be viewed side-by-side.

Behavior

Red pandas are generally solitary, but there are a couple of cases where they develop extended associations with their mothers that last throughout the breeding season.

In terms of territoriality, red pandas tend to have overlapping home ranges with other. This means that they do not search for their own food, but instead patchily distributed across the landscape.
