Linguistic Technology Systems

Group 1: Features of Dataset Applications

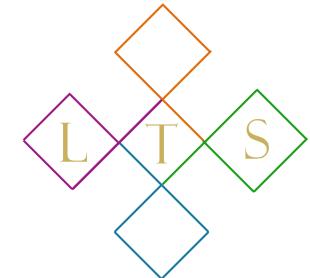

User Interface Features Typical of Dataset Applications

The code for each dsC data set includes a customized “Dataset Application” which displays individual samples and groups of samples via 2D, 3D, and native-compiled GUI controls. Each Dataset Application can thereby make use of advanced visual and interactive features that are uniquely possible when using customized, native-compiled GUI classes. The following screenshots will show several examples of these features, including:

Specialized Top-Level Controls Tree Widgets, Stacked Widgets, and Graphics Scenes.

Context Menus Systematically organize functionality around UI layouts.

Multi-Window Displays Divide application functionality in multiple specialized top-level windows and/or dialog boxes.

Linguistic Technology Systems

In addition, nested rows can display supplemental information, such as data values' rank (3) and percentage (2) (on the scale of the least to greatest value) relative to all other values for each statistical parameter.

Using a "tree widget" (a two-layer spreadsheet), instead of a conventional spreadsheet, allows the Dataset Application to distinguish primary values (those measured directly by physical devices and experimental equipment) from intermediate values calculated via algorithms.

Interacting with the Main Window

35	5.044	0.000227894	0.000230985	5.40	
37	0.554	0.000229983	0.00023039	5.50	
38	1.057	0.000229819	0.000230657	5.50	
31	5.057	0.000229433	0.000232403	5.50	
30	1.108	0.000230476	0.000231223	5.70	
29	0.184	0.000230511	0.000230931	5.80	

Despite being implemented as a tree widget instead of a two-dimensional spreadsheet, the primary window for this Dataset Application has many spreadsheet-like features, such as copying columns of data (1) and sorting columns by switching notebook tabs (2); each notebook page shows the data sorted on a specific parameter.

Two different sets of navigation buttons enable the user to scroll through samples according to the currently selected sort parameter (3), or according to the primary index (4).

Getting Information About Modeling Parameters

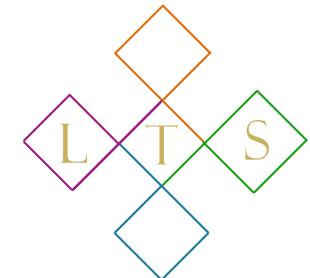

Using Dataset Applications as Pedagogical Tools

In addition to interactive visualization, Dataset Applications are useful tools for understanding experimental protocols and research methods. Within Dataset Applications, modeling units such as statistical parameters and record fields are visible *in situ* within a GUI — identified by labels, buttons, and other interactive micro-controls. As a result, users encounter modeling elements in a structured visual-interactive context. To learn more about modeling elements, Dataset Applications are equipped with several pedagogical features shown on the following screenshots:

“About” Dialogs Brief summaries of research terms and parameters.

XPDF Links Links back to research articles read in an embedded PDF viewer.

XPDF Enhancements The XPDF viewer can be customized for each data set and included with dataset code, with extra features to integrate article or book texts with Dataset Applications.

Linguistic Technology Systems

Obtaining Information About Parameters

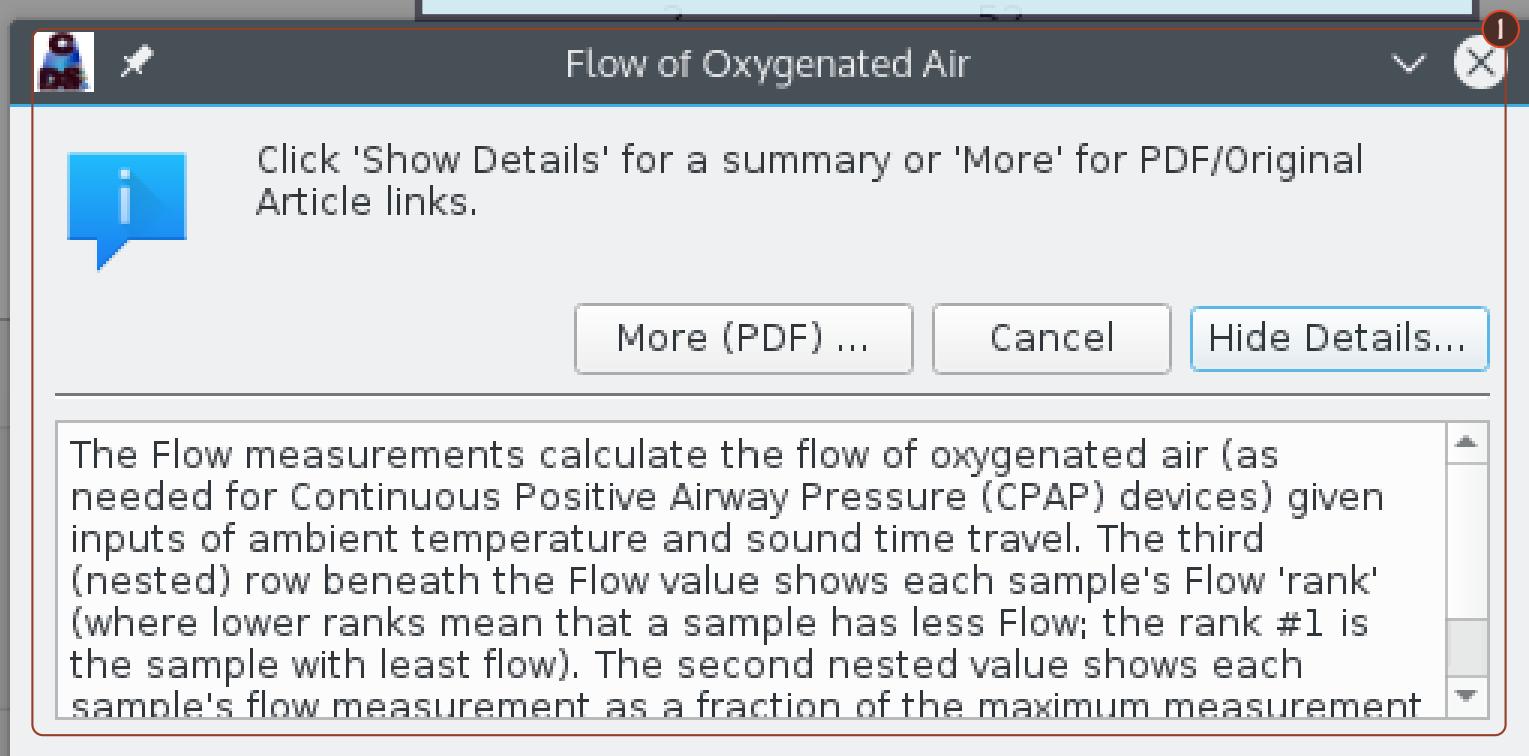

[Customize Build](#)[Activate TCP](#)[Screenshot](#)

Embedding XPDF

[Customize Build](#)[Activate TCP](#)[Screenshot](#)

The screenshot shows the XPDF viewer interface. At the top, there's a toolbar with various icons. Below it is a menu bar with 'File' and 'Edit'. A status bar at the bottom displays the path '/home/nlevisrael/sci...' and page information '2 of 21'. The main content area shows a page from a Wiley Expert Systems publication. A red box highlights a specific text block:

because we know that air is a relatively fixed mixture of gases, primarily consisting of nitrogen, oxygen, argon, and carbon dioxide, that in varying amounts of water vapour or humidity. The speed of sound in air is approximately 343 m/s at room temperature (20 °C or 70 °F). This is primarily a function of temperature; the only other factor that has any significant influence is relative humidity. However, humidity has only a slight influence; an increase in relative humidity by only a small amount of 0.5%, we can conclude that the speed of sound is lower at higher altitudes. This is because the temperature and relative humidity are inversely proportional. The air pressure is lower at higher altitudes. The speed of sound travels slower at lower pressures.

An annotation box with a red border and a white background is overlaid on the text. It contains the following text:

In this example, after viewing a short description of a particular data field inside the Dataset Application, researchers have the option of studying that parameter further by reading at the location in the original publication where the field is introduced or described. The XPDF viewer is compiled as an embedded application within the main Dataset Application and can itself be customized for each data set.

Testing and Fine-Tuning Dataset Applications

Tools for Editors and Developers

Although ordinary users can explore and visualize dsC data sets “Out of the Box”, advanced users have many options for customizing their build of the application in terms of their specific roles and available 3rd-party libraries. These fine-tuning possibilities include:

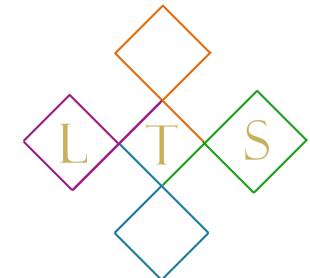

Test Suites Tools for creating and/or running test suites to ensure that the Dataset Application works across platforms.

Data Export Tools for reusing data in other projects.

External Libraries Some features like XPDF and 3D graphics require libraries that cannot be published with the data set in source code form. Advanced users can select which of these libraries to incorporate into their version of the Dataset Application.

Scripting Data sets can compile their own scripting environment to automate testing and manipulation of research data.

Networking Dataset Applications can use an embedded TCP server to communicate with other applications, enabling multi-application workflows (this is also how testing is implemented).

Linguistic Technology Systems

Configuring the Data Set Application

The screenshot shows the 'Operating System Profile' section with 'Linux (Generic)' selected and '64 Bit' checked. The 'Compile Options' section contains several checkboxes: 'Use 3d graphics', 'Use Kauvir/Phaon and TCP (for tests)', 'Use XPDF' (checked), 'Qt PNG/FreeType libraries' (unchecked), 'System PNG/FreeType libraries' (checked), 'Build KDMI Components and Console (for data export)' (unchecked), 'Build Research Object Information Console' (checked), 'Build External XPDF Application' (checked), and 'Preview (right click "Administrator" to enable/disable)' (unchecked). A 'Reset' button is present. The 'Select User Role' section includes checkboxes for 'User, Reader, Researcher (Default)', 'Author' (checked), 'Editor', 'Tester', and 'Administrator'. A button at the bottom says 'Click To Set Compiler Options Based On User Role'. At the bottom are 'OK', 'Proceed', and 'Cancel' buttons.

Using Qt Creator, the Dataset Creator will automatically launch the main Dataset Application with every feature needed in order to visualize and explore the data. In addition, the data set includes several configurations allowing users to incorporate more specialized or complex features, such as XPDF, test suites, and data export code. Users can fine-tune which additional features they wish to utilize — via a separate dialog box **1** and **2** — to create a customized build of the main Dataset Application and supplemental executables.

The Dataset Creator also recognizes distinct "roles" **2**, including general readers, authors, those who double-check the main Dataset Application via a test suite, and those who design the test suite and write dataset code overall (dubbed "Administrators").

Testing the Data Set Application

Dataset Creator includes a sophisticated framework for building and running test suites to ensure that raw data is processed correctly and that User Interface components work properly on different Operating System platforms. This includes a separate testing application that sends instructions to the main Dataset Application via TCP (1).

The testing application has several features to facilitate running tests, including options to repeat tests, mark success or failure (2), and examine the system clipboard (3).

Copy Temperature Ranks: This test should result in the Temperature ranks (sorted by index) being copied to the system clipboard, which can be verified by pasting the clipboard into a blank file and comparing the lines (there should be one sample per line) to the Temperature column as viewed in the tree table dialog. (4)

Testers can also read a description of each test (4), and view the scripts used to create them. (4)

OK

Features of Dataset Applications for Books

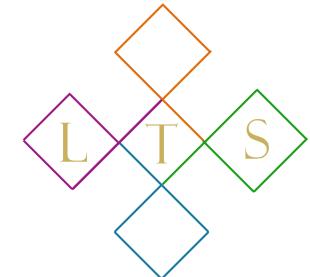

Datasets Compiled From Book Examples

The remaining screenshots demonstrate how data sets can be used even outside of a lab context generating experiment data. The pictured data set represents a corpus of linguistic examples mined from Wiley's *Blackwell Handbook of Pragmatics*. Creating data sets from book-length publications can encompass several steps:

Text Mining In the case of linguistics, this involves locating example sentences within linguistics texts and storing them as an independent corpus.

Canonical Formatting If possible, linguistics texts should be annotated so that extracting examples can be automated.

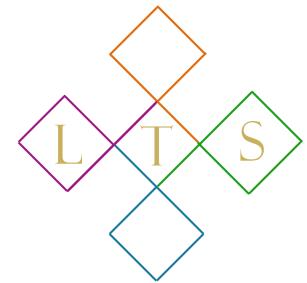

Annotation Linguistic corpuses are often annotated to identify structural details, beyond raw text, in each sample.

Linguistic Technology Systems

Creating a Data Set from a Book

This screenshot shows a linguistics dataset that illustrates several advanced interactive features made possible by the Dataset Creator's Qt-based front-end technology. Useful features include context menus embedded with drop-down selections (1) and button/checkbox groups for filtered scrolling through a list of samples (2 and 3).

The screenshot shows the 'Filter Forms' interface with several panels and a context menu.

- Filter Forms:** A panel containing two groups of checkboxes:
 - Text:** Text, Dialog, Intonation, Paragraph.
 - Issues:** Ambiguity, Context, Logic, Scope, Polarity, Belief, Convention, Idioms.
- Text List:** A list of filtered items:
 - She'll be better off in a new place.
 - I have received the e-mail, but it's in Dutch.
 - I have received the e-mail. ?Nevertheless it's in Dutch.** (Selected item, highlighted in blue)
 - I have received the e-mail. ?Nevertheless it's in Dutch.
 - Her husband is in hospital. Yet she's seeing other men.** (Sub-item, highlighted in red)
 - Her husband is in hospital. Yet she's seeing other men.
 - Her husband is in hospital and she's seeing other men.
 - Her husband is in hospital. But she's seeing other men.
 - Her husband is in hospital. Nevertheless she's seeing other men.
 - Oscar knocked the vase and it broke.
Did Oscar break the vase?
- Form View:** A table showing the selected item's details:

from the matched spaces to create a **blended mental space** with emergent structure. This creates a conceptual integration network of the form shown in figure 29.4. The generic space represents the structure shared by the inputs. The square in the blended space stands here for the emergent structure which arises in the blending.

So, for example, one way to understand the counterfactual in (6):

(6) In France, Watergate wouldn't have done Nixon any harm.

is to build a conceptual integration network that partially matches two input spaces with prominent aspects of the American political system and the French political system, respectively, and develops an emergent blended space

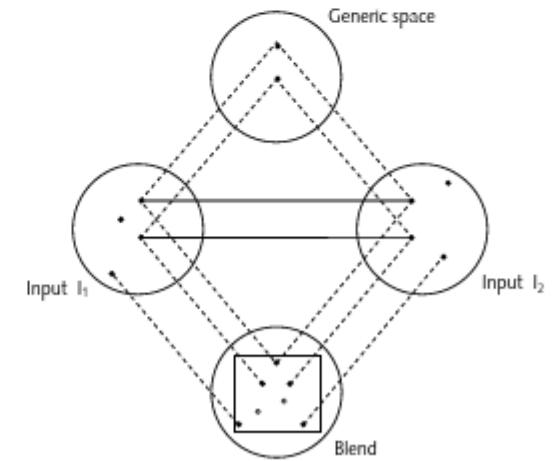

Figure 29.4 Diagram showing conceptual blending

A Linguistics Annotation System

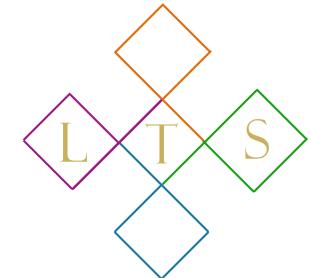

Tools to Facilitate Annotating Linguistic Corpora

The final three screenshots show an example of how a custom-signed application can facilitate the task of building an annotated corpus from a linguistics text. The components demonstrated here enable several strategies (which can be combined) for describing parsing structures and the logical composition of language samples:

S-Expressions Representing linguistic units as semantic and syntactic transformations triggered by words assigned to “functional” types.

Dependency Grammar Representing phrase structures via inter-word syntactic relationships.

Link Grammar Representing linguistic structure via connectors internal to each word-sense. Inter-word links are activated when each word in the pair has a connector compatible with the other word's connector. Intuitively, a connector represents how one word's meaning or grammatical contribution can be “completed” by linking to a separate word.

Linguistic Technology Systems

Building Parsing Models

The main Dataset Application for the demo Linguistics data set includes a distinct window for building annotations on language examples. Features of this component include an entry area for building S-Expression models of sentences with visual cues such as parenthesis-matching color highlights (1) and sidebars where users can add inter-word annotations using relations drawn from Link Grammar and CoNLL-U Dependency Grammar (2).

Using Dock Widgets For Flexible Layout

The list of link/dependency relations is also isolated as a “dock widget” that may be dragged to float above the other application windows (1), or “docked” at different positions (left or right) on its parent window. This screenshot also shows a dialog box used for a precis of the individual CoNLL-U (Conference on Natural Language Learning - Universal) and Link Grammar relations (2).

This screenshot illustrates the use of dock widgets for flexible application layout. On the left, there's a 'Text' editor window showing a list of sentences. Above it is a 'Filter Forms' panel with checkboxes for 'Text' and 'Intonation'. A 'Filter Issues' dock widget is positioned above the main text area. In the center, there's a 'dsmain-console <2>' window containing a table of dependency relations. A 'Dependency Grammar (Refinement)' dialog box is open over the console window, explaining the 'nsubj' relation. The dialog has buttons for 'Ok', 'Hide Details...', and 'Minimize'. The entire interface is set against a light green background.

A3R Document Viewers

A3R applications may embed viewers for document formats such as e-Pub, HTML, and PDF; then supplement conventional publications with special components customized for individual manuscripts: e.g. (as in this case), a widget allowing readers to visually explore patterns in classical Indian music.

The screenshot shows a digital journal interface for 'ANTHROPOLOGY AND HUMANISM'. The top navigation bar includes icons for settings, library, and reading, and tabs for HTML Source, Lisp, CSS, and XML. The main content area displays the journal's title and a link to explore the journal. Below this is an article titled 'Ethnographer as Apprentice: Embodying musical Knowledge in South India' by Michael Weidman, published on December 26, 2012, with a link to the full publication history. A central feature is a 'Display Tala Types' viewer for 'Jhoomra/Dhamar (14 beats)'. It shows a grid of colored rectangles (red, purple, green) representing musical patterns. A slider allows switching between 'Pattern 1 (3-4-3-4)' and 'Pattern 2'. The file path '/extension/ScignSeer/articles/svg/tala.svg' is shown. At the bottom right is a logo for 'ANTHROPOLOGY AND HUMANISM' featuring a globe and the journal name. Navigation arrows are visible at the bottom.

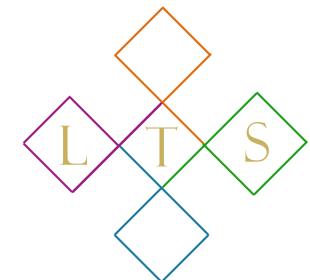

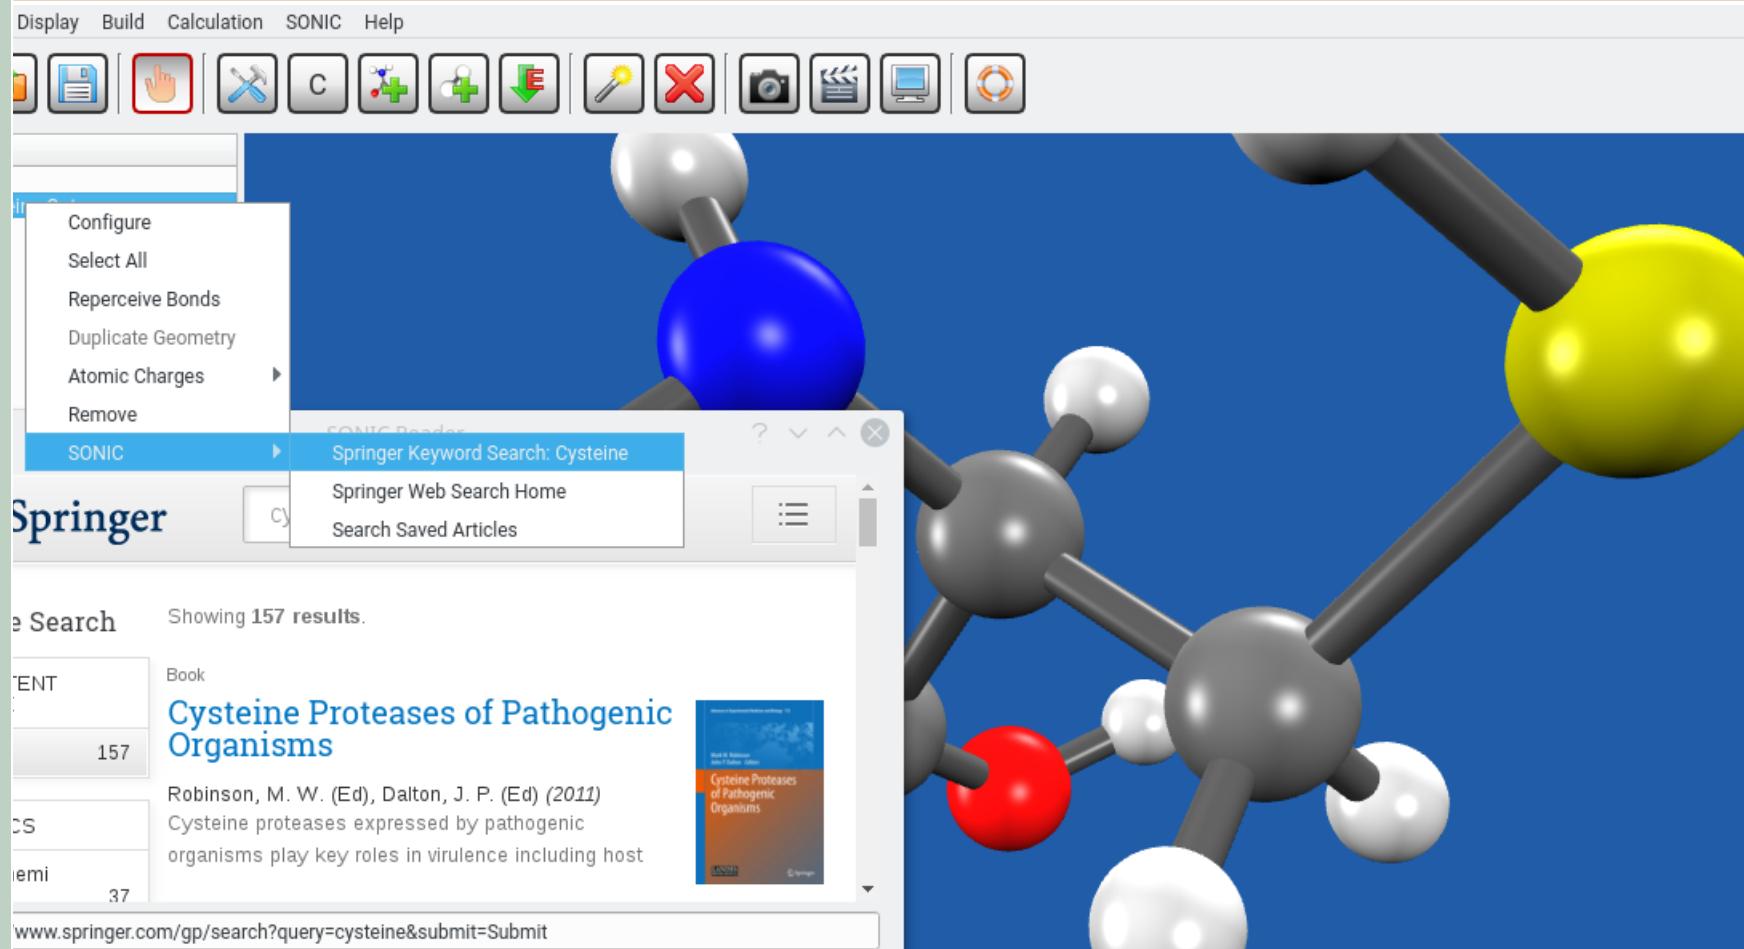

Linguistic Technology Systems

A3R Document Viewers as Embedded Components

Document Viewers may also be embedded in host applications which provide domain-specific visualization capabilities. For example, chemistry papers might be viewed within IQmol (a Qt-based program for molecular visualization and physical/chemical analysis) via an A3R document-viewer plugin.

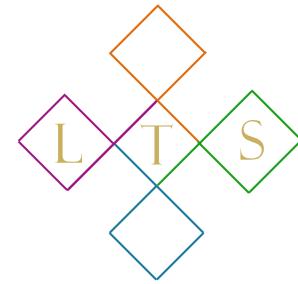

Linguistic Technology Systems

Document Viewers Augmented With APIs

Another strategy for interactive publications is linking documents with APIs maintained by publishers, or by cultural or educational institutions.

View Instructions

As an example, documents mentioning artifacts held in a museum can provide features to view more information about those museum-pieces through the host institution's API.

In this case a video player is launched in a dialog box, floating above the article text. For those reading digital books or articles, videos and other multimedia content can be presented through secondary windows launched via context menus; text and multimedia may thereby be viewed side-by-side.

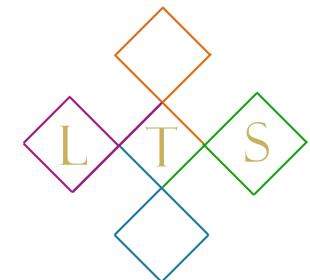

Behavior

Red pandas are generally solitary, but there are a couple of cases where they do develop extended associations with their mothers that last beyond the breeding season.

In terms of territoriality, red pandas tend to have overlapping home ranges with other. This means that they may search for the same food sources, particularly during the breeding season.
